

# What are new Changes for 3017?

By Andrew Luong Dong Vien (An entry for Future Story Contest)

## New Changes for the classroom

I think in a thousand years, they going to add sci-fi desks that can help you organize desks, spawn messages and reminders for 60 seconds. I also think that they're going to remove announcements due to the sci-fi desks. The sci-fi desks could have a monitor inside the desk which could be turned on/off to search for interesting details, used for writing and they could Email their teacher when they are done on the internet.

## New Changes for Security Lockdowns

I think that they're going to add new security cameras that can shoot lasers just in case if there's an emergency lockdown or a school shooter on a loose. I also think that they're add HIGH SECURITY doors that can falls every door (Even a washroom door) if there's an emergency lockdown or a school shooter on a loose. The HIGH SECURITY doors can be bulletproof, saw proof, lazerproof, waterproof and the materials of the doors could be ballistic materials or fully armored ballistic material and these doors can be opened once the police plugs their keycard to open the door.

## New Changes for the Hallways

I think they're going to add a new water dispenser that can refill water bottles and a cup dispenser near every water dispenser just in case if anyone without water bottles need to drink with a cup. I also think that they're going to remove the water fountains due to water dispensers and I also think that they're going to replace janitors into robotic helpers. The robotic helpers should be water-proof instead of being normal, they should be chargeable and they should be charged inside in the office. The cup dispenser should include a red button to drop a cup in your hands.

## New Changes for All

I think they're going to add a new clock that can set up time if the teacher wants to set up a challenge for the students or giving them some time to finish up their work. I also think that they're going to add a new doormat just in case if their shoes are dirty or messy. I also think that they're going to add a new comfy chair for teachers, staff and guests instead of using uncomfy chairs. The new clock should be hanging up, they have to use mechanical materials in order to build this clock, they should be chargeable and they should be charged in their own office. The doormat should clean themselves ever since they're high tech. Their materials should be rubber, cloth and other materials of door mats. The comfy chairs' materials should be a very soft pillow inside of a chair, they should pop out a blanket over your chair (just in case if you're cold) and they should be high tech.
