

The Future

by Gavin Kassouf.

Hello, My name is Gavin Kassouf. I live in Halifax, Nova Scotia and it is Nov 10 2017. This report is devised to guide you through the passing of 500 years.

One of the first things that will transform will be the English language. It will have evolved for superior understanding. The English language will evolve to look more like morse code. There will be more lines and dots in the language. This is what the new english will look like:

a	b	c	d	e	f	g	h	i	j	k
o	l	-	\	/	o	o	o	o	T	x
l	m	n	o	p	q	r	s	t	u	v
.	-	l.	o	.	-	..	^	v	<	>
w	x	y	z							
◇	.	<>	□	z						

I also think the the future the bills will be a strong laminated paper. I think there will be a 1 dollar bill too. Our dollar today will be worth .40 cents in the future.

I think for phones there will be a company that is so good it will shut down Apple, Nokia, Sony, LG, Samsung, HTC, Motorola and Huawei.

There would be a touch screen tv that this company makes. Including many other gadgets that you will know what they are in the future.

I think some of the most unthinkable features will be achieved in the passing of so many years. I think one of those things will be the way we travel through space. I think Nasa will reach planets so far away that we cannot even see it on some of our most powerful telescopes. In the future we will have found a fuel for our rockets that is lightweight and is so potent that it will take our rocket for millions of light years. I also believe that our rockets will bend the fabric of space to move faster than light. In the future it will also be fairly cheap to go to space and I believe it will be a popular journey. We will have made so many achievements in space imagine how many we will have made on earth.

Some cars will most likely be able to reach an unthinkable speed in the future. They will be able to rev so loud they can break eardrums. Other cars you see every day might look like a million dollars in the future. But compared to other cars it will look like a normal car now.

At this time people will be evolved to make the average age of living be around 78 the average age right now is 65.

Now you know how we will soon live. Some may say in luxury, but how can YOU change our world for the better. Turn off your computer. Save energy. Our world is a precious resource, and we only get one.

Goodbye, this was Gavin Kassouf with a guide through the future.
